Properties of an n -sided regular polygon

$$\theta = \frac{360^\circ}{n}$$

$$\frac{\theta}{2} = \frac{180^\circ}{n}$$

$$\frac{r}{r_{\max}} = \cos \frac{\theta}{2} \Rightarrow r_{\max} = r \sec \frac{\theta}{2}$$

$$\frac{l/2}{r} = \tan \frac{\theta}{2} \Rightarrow l = 2r \tan \frac{\theta}{2}$$

$$\underline{\underline{n=12}}$$

$$\frac{\theta}{2} = 15^\circ$$

$$r_{\max} = r \sec 15^\circ = 1.03528 r$$

$$l = 2r \tan \frac{\theta}{2} = 0.5359 r$$

$$\underline{\underline{n=24}}$$

$$\frac{\theta}{2} = 7.5^\circ$$

$$r_{\max} = r \sec 7.5^\circ = 1.00869 r$$

$$l = 2r \tan 7.5^\circ = 0.2633 r$$

24
sill plate
pieces

2 or 3 12-sided rebar rings

12 plywood outer forms

outer of outer
form is about
 $\frac{3}{16}''$ larger

12 plywood inner forms

In both cases, the side faces the concrete is specified
